# United4Health

## EHTEL (European Health Telematics Association)

**Transforming the Patient experience with telehealth in Europe..  
A Policy Perspective**

### What is our goal?

EHTEL recognises that for scaling-up innovation services in health care, tools and methods are required for building evidence on the impact, adapting existing business models, developing innovative ones and managing the scaling up process. EHTEL's mission is also to support the Policy push needed to enable the deployment of telehealth in routine care and on a large scale.

With participation in United4health, EHTEL will raise awareness in a multi-stakeholder audience on the knowledge and experience gained in deploying telehealth services and the results achieved from the impact assessment work. MAST is likely to be one of the tools needed with United4Health is aiming at validating this for assessing the economic and organizational impact of telehealth. The lessons learned from United4health in deploying services will also help in terms of tools and methods by contributing to the development of good practices in deploying telehealth in routine care.

### How will we achieve it?

Information will be circulated through different channels, such as; the project website, YouTube channel, printed documents and presentations in conferences, to raise awareness about the knowledge and experience gained in deploying telehealth services on a large scale and assessing their potential economic and organisational impact. EHTEL will contribute and encourage contribution to the organizational and/or content of European, National and Local conferences, workshops and other events.

Furthermore EHTEL will convene in a Policy Advisory Board European NGO's representing the different stakeholders engaged in or concerned by the deployment of eHealth. The Policy Advisory Board will review the result of renewing Health, the predecessor of United4Health complemented by the results and experience gained by United4Health in a view to create multi-stakeholder consensus on the main policy messages to derive from these results and spread them across Europe in a view to facilitate the deployment of eHealth for the improvement of Healthcare delivery.

### Who are we?

EHTEL is a multi-stakeholder forum providing a leadership and networking platform for European corporate, institutional and individual actors dedicated to the betterment of healthcare delivery through eHealth. EHTEL serves and convenes a growing membership of more than 60 organisations that come from various viewpoints but united in their interest to make eHealth work. By collecting and distilling their voices through work groups and publications, EHTEL amplifies the constituency for eHealth in the European arena.

### NEXT MONTH

*United4Health (2013-2015) aims to deploy and evaluate at scale innovative and targeted telehealth services in 14 regions across Europe concentrating on Diabetes, Chronic Obstructive Pulmonary Disease (COPD), Congestive Heart Failure (CHF) and Hypertension. The goal is to improve the patients experience, giving them a central role in the management of their long term condition with the use of remote monitoring.*
